Data in red are 12-month highs, blue 12-month lows, green revised					For price specs. go to: www.open-i.ca/PriceSpec.htm				

COMMENT: Crop prices were yet again lower this week and are generally at levels last seen in June for wheat and corn and August for canola and soybeans. Market attention has switched to southern hemisphere crops. Prospects for the approaching Australian and Argentinian wheat harvest are reported to be favourable while South American corn and soybeans crops are in an early stage of development. Any El Nino influence has yet to materialize.

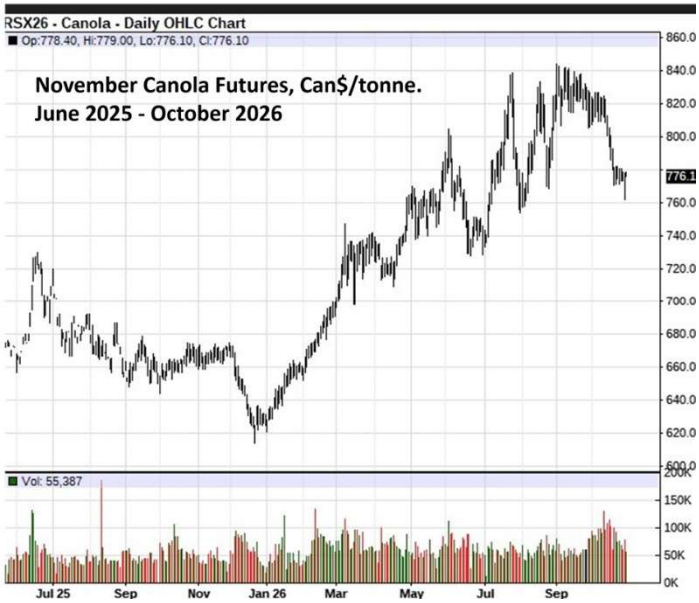

NEWS: The USDA reported the condition of the **US corn** crop as of October 25 unchanged from the previous week at 26 percent good/excellent, slightly below the five-year average. This is the final condition report for the 2026 corn crop which is now 66 percent harvested on a par with the five-year average.

The winter wheat crop was 76 percent planted compared a 77 percent 5-year average. Emergence is placed at 53 percent compared to a 54 percent 5-year average.

Prairie provincial crop reports suggest close to completion of the 2026 harvest.
For MB, as of Oct 27: Harvest progressed to 94 percent complete up from 86 last week.
For SK, as of Oct 26: No report
For AB, as of Oct 27: Harvest progressed 4 percentage ponts from last week to 97 percent complete. Surface soil moisture is rated 66 percent good-to-excellent and sub-surface 65 percent. suggesting that soil moisture reserves are near or above normal for most of the province.

OPINION: The recent slide in canola prices may appear modest relative to price gains over the last 30 months. However, the 30-month gains need to be discounted by the increase in input costs over this timeframe.
